## EDUCATION

<b>Ph.D. in Computational Biology</b> ◇ <i>The University of Texas at Austin, Austin, TX</i>	Expected May 2019
<b>M.S. in Microbiology</b> ◇ <i>Huazhong Agricultural University, Wuhan, China</i>	Grad. June 2013
<b>B.S. in Biotechnology</b> ◇ <i>Huazhong Agricultural University, Wuhan, China</i>	Grad. June 2011

## WORK EXPERIENCE

<b>Applied Scientist Intern</b> ◇ <i>Zillow, Seattle, WA</i>	May 2018 - September 2018
<b>Improved Recommendation Diversity in Real Estate Recommender System   Python, Spark, AWS</b>	
<ul style="list-style-type: none"><li>· Categorized all listings across the US on Zillow using <u>Bisecting Kmeans</u> algorithm;</li><li>· Implemented and extended a personalized diversity algorithm published on RecSys'16 from scratch using PySpark;</li><li>· Improved the diversity of recommendation by <u>at least 30%</u> in offline evaluation, while maintaining comparable accuracy (NDCG, recall, precision) of recommendation, compared with the current recommendation model in production;</li><li>· Integrated the algorithm into a in-house package used by applied scientists.</li></ul>	
<b>Machine Learning Intern</b> ◇ <i>QuintilesIMS, Plymouth Meeting, PA</i>	June 2017 - August 2017
<b>Predicted Quality of Investigators in Future Clinical Trials   Python, Spark</b>	
<ul style="list-style-type: none"><li>· Predicted outliers of investigators per Key Risk Indicator using <u>distribution based approach</u>;</li><li>· Built multiple machine learning models (Lasso Regression, Neural Network, Random Forests) to predict the quality of investigators in a future study, which is one of the core projects in the investigator recommender system.</li></ul>	
<b>Graduate Research Assistant</b> ◇ <i>The University of Texas at Austin, Austin, TX</i>	December 2014 - Present
<b>Developed a Supervised Anomaly Detection Algorithm for Infectious Disease Surveillance   Python</b>	
<ul style="list-style-type: none"><li>· Adapted a statistical anomaly detection method <u>Multivariate Exponentially Weighted Moving Average (MEWMA)</u> to a supervised model;</li><li>· Applied <u>genetic algorithm</u> to optimize parameters of the above model;</li><li>· Developed novel metrics to evaluate the performance of the model;</li><li>· Applied <u>stepwise variable selection algorithms</u> to optimize the selection of time series predictors in anomaly detection;</li><li>· Detected flu outbreaks in the US with an <u>accuracy 0.9</u> using the above model with an optimal combination of time series.</li></ul>	
<b>Developed Infectious Diseases Surveillance App   Python, AWS</b>	
<ul style="list-style-type: none"><li>· Implemented a <u>regression model</u> and the <u>supervised MEWMA model</u> in the application;</li><li>· Built up data pipeline to automate the process of retrieving and cleaning data related to 526 infectious diseases from CDC, RSS feed, Google Trends, Wikipedia, Twitter etc;</li><li>· Integrated the App into Cloud Ecosystem in collaboration with a software engineer.</li></ul>	

## PUBLICATIONS

- Liu K, Srinivasan R, Meyers LA. Early Detection of Seasonal Influenza in the United States. *Under review*.
- Castro LC\*, Fox SJ\*, Chen X, Liu K, Bellan SE, Dimitrov NB, Galvani AP, Meyers LA. Assessing Real-time Zika Risk in the United States. *BMC Infectious Diseases*. DOI: 10.1186/s12879-017-2394-9.

## PERSONAL PROJECTS

<b>Predicted the Direction of Exchange-Traded Fund (ETF) movement   Python</b>	April 2017 - May 2017
<ul style="list-style-type: none"><li>· Retrieved nine historical ETF sector datasets from Yahoo Finance;</li><li>· Implemented <u>Logistic regression</u>, <u>Ridge &amp; Lasso regression</u>, and <u>Artificial Neural Network</u> to predict the direction of ETF movement;</li><li>· Achieved an <u>accuracy of 55% ~ 60%</u> for predicting nine ETF sectors movement; and the trading strategy based on my prediction outperforms baseline strategies.</li></ul>	
<b>Predicted Yelp Rating Based on User Review Enhanced Collaborative Filtering   R</b>	September 2015 - December 2015
<ul style="list-style-type: none"><li>· Extracted user opinions from restaurants dataset from Yelp (~10GB) using <u>Stanford coreNLP tool</u>;</li><li>· Developed a <u>new Collaborative Filtering-based method</u> to improve the accuracy of user's rating prediction and solve the sparseness of dataset by <u>combining item's features</u> and user opinions from all reviews;</li><li>· Improved the prediction accuracy by <u>4.23%</u> compared to the traditional KNN method, and the <u>coverage is 100%</u>.</li></ul>	

## SKILLS

<b>Programming</b>	Fluency in Python(NumPy, SciPy, pandas, scikit-learn), Spark, SQL, R, Git · Experience in Hadoop, TensorFlow, C++
<b>Machine Learning</b>	Rule-based models(GBM, RF etc) · Regression · Neural networks(GCN, CNN, RNN etc) · Other supervised models(SVM etc) · Clustering · Time series models · Natural Language Processing · Image Processing
