

# KAI LIU

kai.liu@utexas.edu • 512.917.6781 • GitHub://KaiUT • LinkedIn://Kai Liu

## PROFILE

- Ph.D in Computational Biology (expected August 2018);
- Ample Skills in data science:
  - Experience in data mining, machine learning, statistical inference, and big data analysis;
  - Comprehensive technical/computing skills includes Python, R, Unix, Vim, Git, C++;
- Excellent problem solving skills in both independent and team environments;
- Skilled presenter of technical material to both technical and non-technical audiences;
- Quick, thorough and effective learner.

## EDUCATION

|   |                      |
|---|----------------------|
| <b>Ph.D in Computational Biology</b> ◇ <i>The University of Texas at Austin, Austin, TX</i> | Expected August 2018 |
| <b>M.S in Microbiology</b> ◇ <i>Huazhong Agricultural University, Wuhan, China</i>          | Grad. June 2013      |
| <b>B.S in Biotechnology</b> ◇ <i>Huazhong Agricultural University, Wuhan, China</i>         | Grad. June 2011      |

## RESEARCH EXPERIENCE

|   |                         |
|---|-------------------------|
| <b>Graduate Research Assistant</b> ◇ <i>The University of Texas at Austin</i> | December 2014 - Present |
|---|-------------------------|

### Developing Infectious Diseases Surveillance App in Python

- Retrieved and cleaned infectious diseases related data from Google Trends, Wikipedia, WordPress etc;
- Developed a regression model and a Multivariate Exponentially Weighted Moving Average(MEWMA) model to detect infectious disease outbreaks using multiple data sources, in collaboration with a mathematician;
- Improving performance and speed of the algorithms;
- Assessing the algorithms on infectious diseases in different regions (using 552 time series data sources);
- Connecting algorithms with the App back-end and front-end, and integrating the App into Cloud Ecosystem, in collaboration with a front-end engineer.

### Assessed Real-time Zika Risk in the State of Texas

- Collaborated with other researchers in developing a branching process model framework that captures variation and uncertainty in Zika case reporting, importations, and transmission;
- Applied the framework to assess county-level epidemic risk throughout Texas.

### Developed Mathematical Models for Infectious Diseases

- Developed Ordinary Differential Equations framework for infectious diseases eliminating the assumption that all individuals in a population have the same number of contacts, based on models published previously.
- Simulated infectious diseases spreading on contact networks using multiple algorithms.

## COURSE PROJECTS

|  |                              |
|--|------------------------------|
| <b>Denoised GPS Data by Applying Kalman Filter</b> | October 2016 - December 2016 |
|--|------------------------------|

- Implemented Kalman filter in R, and smoothed GPS data collected from a vehicle cruising around campus (814458 samples).

|  |                                |
|--|--------------------------------|
| <b>Predicted Yelp Rating Based on User Review Enhanced Collaborative Filtering</b> | September 2015 - December 2015 |
|--|--------------------------------|

- Developed a new Collaborative Filtering-based method to improve the accuracy of user's rating prediction and solve the sparseness of dataset by combining item's features and user opinions from all reviews;
- Applied the new method to predict user ratings using restaurants dataset from Yelp (~10GB). Its performance is 4.23% better than that of traditional KNN method, and its coverage is 100%.

|  |                              |
|--|------------------------------|
| <b>Forecasted Tourism Earnings of United Kingdom</b> | October 2015 - December 2015 |
|--|------------------------------|

- Predicted Tourism Earnings of UK using a dynamic linear regression model and Forward Filtering and Backward Sampling algorithm.

|                             |                               |
|-----------------------------|-------------------------------|
| <b>Statistical Modeling</b> | November 2014 - December 2014 |
|-----------------------------|-------------------------------|

- Applied a regression model to a dataset to determine 1) factors related to 12 month weight loss, and 2) whether an intervention was effective in increasing weight loss by using both frequentist and Bayesian inference methods.

## SKILLS

|   |  |
|---|--|
| <b>Statistical Modeling</b>                           | Regression models · Time series and dynamic models · Hypothesis testing and confidence interval · Data fitting · Ordinary differential equations · Network simulation      |
| <b>Big Data Analysis</b>                              | Online learning · Regularization and sparsity in statistical models · Matrix factorization · Spatial smoothing · Principal component analysis and dimensionality reduction |
| <b>Data Mining &amp; Machine Learning Programming</b> | Regression · Classification · Clustering · Frequent Pattern Mining<br>Fluency in Python, R, Git, Unix · Familiar with Vim, Linux · Experience in C++, MATLAB, LaTeX        |

COURSES

|                  |   |
|------------------|---|
| Graduate Courses | Data Mining · Statistical Modeling I · Statistical Models for Big Data · Time Series & Dynamic Models · Regression Analysis   |
| MOOC             | Machine Learning · Coding the Matrix: Linear Algebra through Computer Science Applications · Pattern Discovery in Data Mining · R Programming · Getting and Cleaning Data · Exploratory Data Analysis |

TEACHING EXPERIENCE

|   |                                |
|---|--------------------------------|
| Teaching Assistant ◇ <i>The University of Texas at Austin</i>   | September 2015 - December 2015 |
|   | September 2014 - December 2014 |
| <ul style="list-style-type: none"><li>· Mentored two lab sections (48 students) of an undergraduate genetics course and an undergraduate microbiology course;</li><li>· Got 4.3/5.0 in both course evaluations;</li><li>· Prepared lab lectures and lab plans;</li><li>· Graded quizzes, assignments and exams.</li></ul> |                                |
